QUINTET.NET: AN INTERACTIVE PERFORMANCE ENVIRONMENT FOR THE INTERNET

Georg Hajdu

Hamburg Academy of Music and Theater

For me, the highlight was Georg Hajdu's "Quintet. net: A Quintet on the Internet" because it is an immediately pragmatic system and overcomes in a musical way some of the limitations of Internet-based performance systems.

Ian Whalley
Computer Music Journal 28.1 Summer 2004

1. Intro

Quintet.net is an interactive network performance environment invented and developed by composer and computer musician Georg Hajdu. It enables performers at up to five locations to play music over the Internet under the control of a "conductor." The environment, which was programmed with the graphical programming language Max/MSP consists of four components:

- Server,
- Client,
- Conductor,
- Listener as well as the
- Viewer add-on.

These components exchange data using Matt Wright's *OpenSoundControl (OSC)* and *otudp* objects, which were the first objects to implement the User Datagram Protocol in the Max programming environment. Quintet.net was conceived in 1999, soon after CNMAT made these objects publicly available.

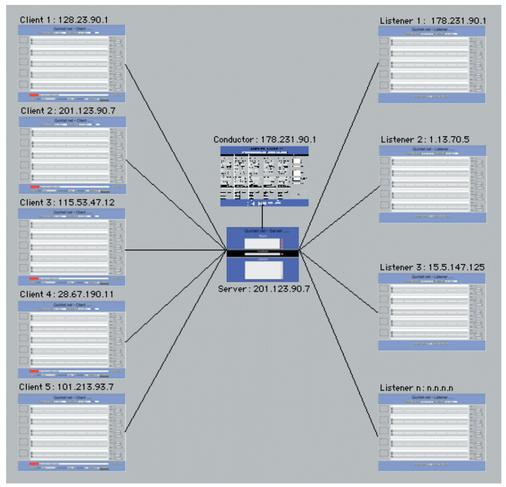

Figure 1: Quintet.net consists of 4 program components connected in a local network or over the Internet.

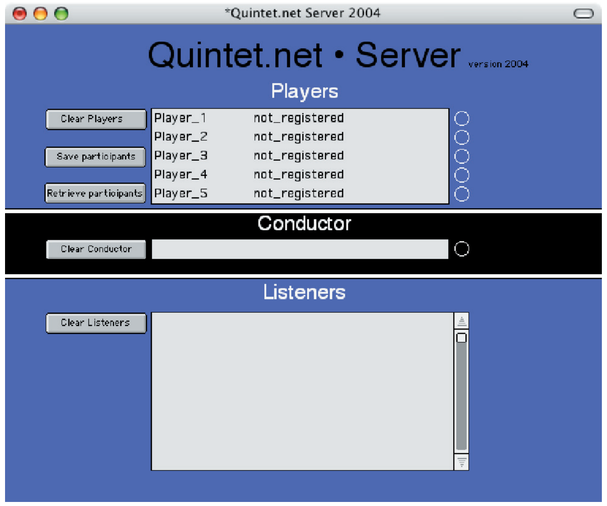
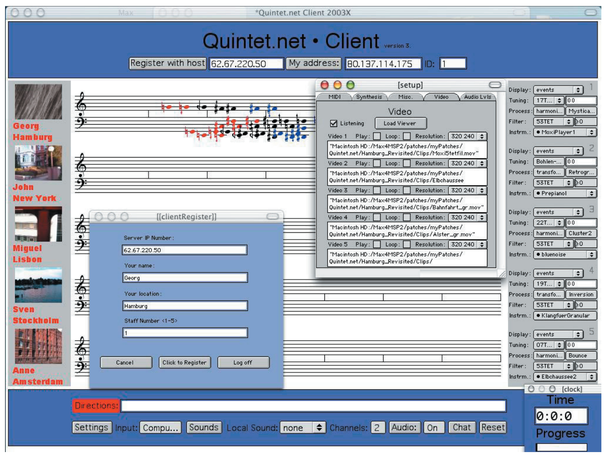
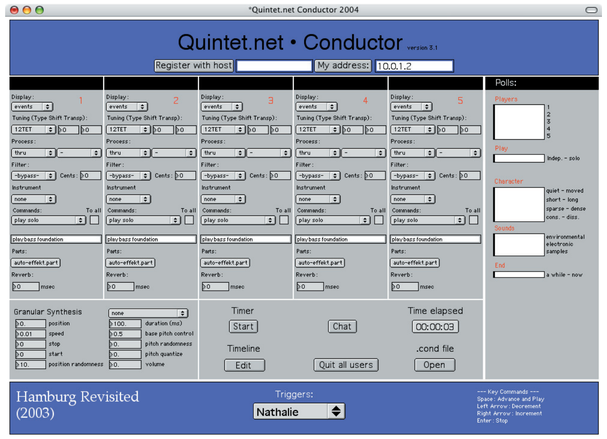
2. Interaction under the control of a conductor

The players interact over the Internet by sending control streams to the Server either using a pitch-tracker, MIDI or simply the computer keyboard. On the Server, the streams get copied, processed, and sent back to the Clients as well as to the Listeners. In addition, a conductor can log onto the server and control the musical outcome by changing settings remotely and sending streams of parameter values as well as short commands to the players.







Figures 2-4: Screen shots of the Server, Client and Conductor components

3. Audio, music notation and live video processing

Quintet.net uses a sampler or MIDI for instrumental playback. It also features granular synthesis as well as vst~ plug-ins for sound processing and playback, and has additional video and graphical properties, which permit better interaction and control on a symbolical level: The performers along with the audience see the music which the participants produce on screen in "space" notation on five grand staves. In addition video clips and/or live video can be displayed by the Viewer add-on and mixed with real-time music notation for an enhanced viewing experience. The Conductor can also read musical scores and send parts to the performers, which will be displayed along with the notes produced by the musicians.

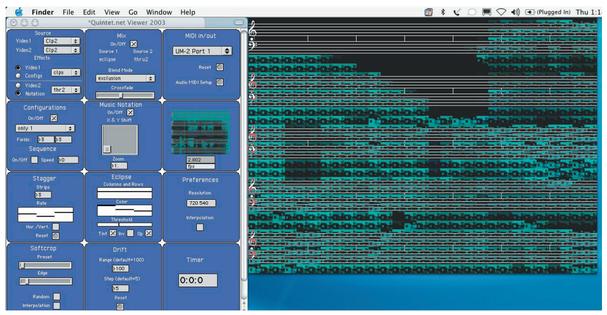


Figure 5: Screenshot of the Viewer add-on which can be used with the Client and/or the Listener.

Figure 6: Guitarist Erhard Hirt during a performance of *Five* by John Cage

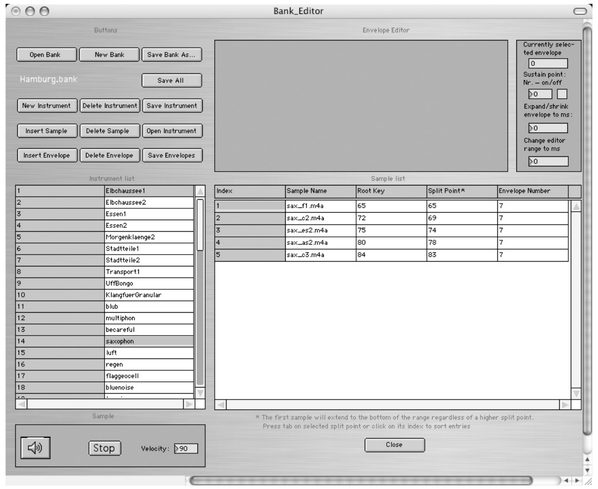
4. Composing for Quintet.net

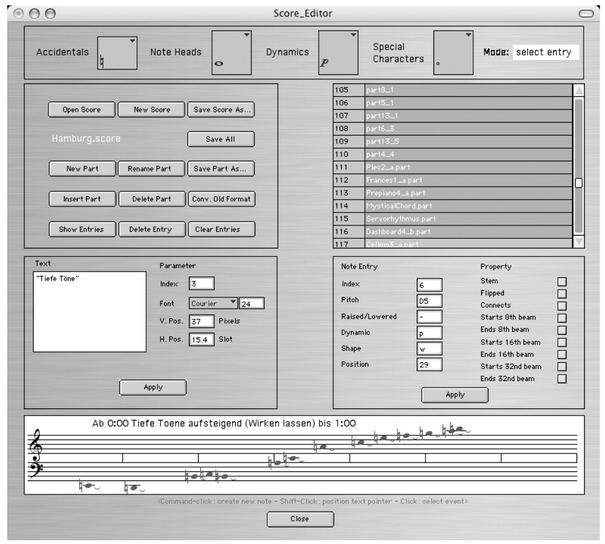
The music performed with Quintet.net is a combination of composed and improvised elements. The lack of real synchronicity due to the usual delays on the Net, necessitates the adaptation of a genuine "Internet" performance style for which John Cage's number pieces could be considered a model: These pieces require certain notes or phrases to be played within "time brackets."

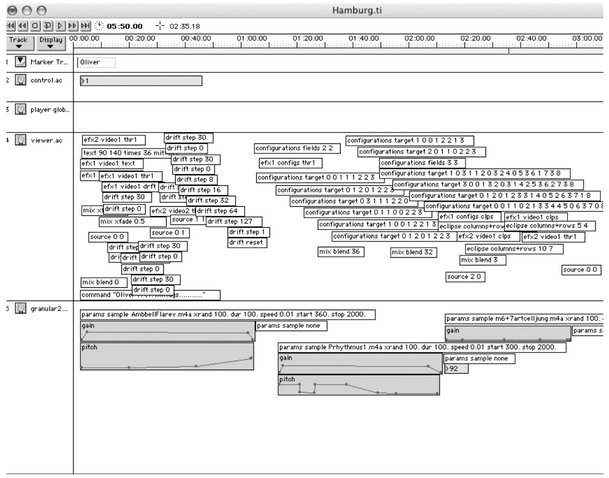
Figure 7: Excerpt from the score (part 1) of *Five* by John Cage. The musical events are allowed to occur freely between time brackets

5. Composition development kit

Recently, a composition development kit, including several visual editors, was added in order to facilitate the creation of pieces for the environment.







Figures 8-10: Screen shots of the Bank editor, Score Editor, and a timeline which the conductor loads to control the performance

6. Pieces realized with Quintet.net

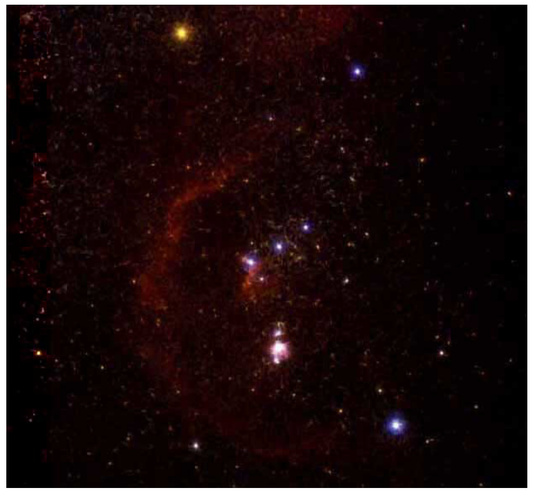


Figure 11: Georg Hajdu's MindTrip is a piece about the possibility of communicating with an extra-terrestrial intelligence.

(The city names indicate the location of the conductor)

Georg Hajdu: *MindTrip* (2000)
Festival Mystik und Maschine, Münster, October 2000

John Cage: *Five* (1986, arr. 2001)
Anne around, Groningen, November 2001

Manfred Stahnke: *Orpheus Kristall* (2002)
Munich Biennale for Contemporary Opera, Munich, May 2002

Anne La Berge: *Vamp.net* (2002)
Eindhoven, October 2002

Hamburg Network Composers' Collective: *Hamburg Revisited* (2003)
Campus Innovation, Hamburg, September 2003
